

Group 1: **Assessment OF Learning**
 Members (only those who participated in this activity):

What is it?	Teacher's Role	Students' Role	Planning for Assessment OF Learning	Examples of Assessment OF Learning
Assessment <i>OF</i> Learning is a summative evaluation that usually happens at the end of a learning cycle. It is used to measure and confirm a student's proficiency, allowing both the student and the teacher to make significant educational and vocational adjustments. It is designed to provide evidence of achievement to parents, other educators, the students themselves, and sometimes to outside groups. Due to the assessments weight and role in education, it is required that the assessment of learning to be highly credible and defensible.	Report student learning accurately and fairly	Students will adopt an active and reflective role in planning, managing, and assessing their learning. Show their understanding and produce sufficient information to support credible and defensible statements about the nature and quality of their learning, so that others can use the results in appropriate ways	Assessment should showcase the mastery level of the student regarding a learning competency which could help gather data and possibly improve the school's programs.	Written assessments: unit tests, chapter tests, and midterm and final exams - to assess students' learning
	Provide a clear rationale for undertaking a particular assessment		The assessment method should depend on the learning competency that is being measured.	Performance assessments: Skill demonstrations, performances, and oral presentations - to assess students' knowledge and skills
	Communicate a clear intended learning outcome		Data collected should be reliable and valid (enough sample size, appropriate assessment, fair and equal assessment)	Outcome assessments: graduation portfolios, simulations, and multimedia projects - to provide evidence of students' learning
	Develop assessments which will allow students to demonstrate their competence and skills		Assessment should be made to achieve learning competencies to serve as proof that they have the mastery of the subject matter.	
	Use multiple assessments methods		Assessments should have a rubric and be recordable	Reporting methods: report cards with expanded comments and parent-teacher conferences - to share students' progress and
	Adhere to public and defensible criteria when making judgements on student's achievement		The assessment should be able to be used for student feedback, design learning, progress report, and intervention.	
	Use transparent approaches for interpretation of assessment results			
	Explain the assessment process			
	Developing strategies to resolve concerns about assessment decisions
