

2E-EDUC 4- ASSESSMENT OF LEARNING Term 2 SY 2025-2026

Classroom Teaching Observation Tool

I. CTP Student Profile

Name of CTP Student: Rose Marianne Louis M. Gardoce

Degree Finished: AB Foreign Service

CTP Subject Enrolled: Educ 3 (Principles and Methods of Teaching) and Educ 4 (Assessment of Learning)

II. School Observation Profile

School/Institution: PNU CTL

Date of Observation: August 17, 2026 Time: 7AM – 9AM

Learning Area/Subject Observed: Course/Degree: English

Grade/Year Level: Grade 9

Duration: 1 hour and 30 minutes (lesson proper) feedback (30 minutes)

Subject Matter/Topic: English : Binary Opposition

Lesson Objectives:

- Define binary opposition as a literary concept and its role in understanding texts.
- Appreciate the importance of examining opposing perspectives in societal values presented in The Lottery.
- Construct a polarity map that illustrates the major opposing concepts in The Lottery.

MY PERSONAL OBSERVATION EXPERIENCES

Questions	Actual Observations
1. How did the teacher begin the lesson?	The teachers started with routine greetings, requested a student volunteer to lead the opening prayer, and had the class secretary take attendance. They then transitioned into an interactive diagnostic/recall drill.
2. How did the teacher communicate the lesson objectives?	The teachers communicated the objectives through structured discussion and transition prompts, explicitly stating that by the end of the session, students would define binary opposition, examine opposing societal values in <i>The Lottery</i> , and construct a Polarity Map.
3. What content/topic did the teacher develop in the lesson?	The lesson developed the concept of Binary Opposition which is a literary writing style that demonstrates how contrasting paired concepts (e.g., Sanity vs. Insanity, Love vs. Hate, Tradition vs. Change) build literary meaning, develop characters/conflict, and reflect societal values, specifically applied to Shirley Jackson's short story <i>The Lottery</i> .
4. How did the teacher implement/carry-out the activities in the following: (A) Lesson Introduction/Introductory Part	
(B) Lesson Development	Conducted "Pose or Oppose?" (15 mins) where students imitated viral gestures (Sigma pose, Thinking pose, Heart hands). The teacher guided them to identify the Sign (gesture), Referent (meaning like confidence/thoughtfulness/love), and its Opposite (insecurity/carelessness/hatred), establishing that meanings are clarified through contrast.
(C) Culminating/Closure	1. Literary Scaffolding: Introduced binary oppositions using classic scenarios (<i>The Tell-Tale Heart</i> , <i>The Lady or the Tiger?</i>). 2. Think-Pair-Share: Students spent 30 seconds thinking of real-life/media oppositions and discussed with seatmates. 3. Pop-Culture Application: Analyzed binary oppositions in popular media (<i>Avengers: Endgame</i> , <i>Romeo and Juliet</i>).

	4. Textual Analysis ("Spot the Opposition"): Examined primary excerpts from The Lottery across three dimensions: Tradition vs. Change, Community vs. Individual, and Normalcy vs. Violence
5. What teaching approaches/ methods/ did the teacher use? Enumerate them and describe the steps (if possible)	1. Inductive / Inquiry-Based Approach: Guided students from concrete visual examples (gestures/memes) to abstract literary concepts before formal definitions were given. 2. Think-Pair-Share: Prompted individual thinking then paired discussion and lastly, class sharing to encourage peer collaboration. 3. Scaffolding / Textual Analysis Method: Used short quotes and targeted questioning to lead students from basic comprehension to thematic evaluation
6. What instructional materials including technology were used by the teacher?	Presentation Tools: Canva slide presentation. Visual Aids: Meme/pose images (Sigma pose, Thinking pose, Heart hands, movie posters for <i>Avengers</i> and <i>Romeo & Juliet</i>). Worksheets: Printouts of "The Polarity Map" worksheet equipped with a 20-point analytic rubric.
7. How did the teacher assess the attainment of the lesson objectives?	• Diagnostic: Gesture analysis ("Pose or Oppose?") assessing prior knowledge of signs and opposites. • Formative: Oral questioning during Think-Pair-Share and excerpt discussions. • Performance Assessment: Evaluation of "The Polarity Map" graphic organizer and the 5–7 sentence written justification rubric measuring textual evidence, thematic analysis, and clarity.

OBSERVATION TOOL FOCUSED ON ASSESSMENT

Study the rubrics found below for Indicators 20 and 21 of the Classroom Observation Tool. Based on your observation, check the score (from 1 to 9) of the performance of the observed teacher. The descriptions in the “Features of Practice” and in the “Clarification” that follows may help you to understand further the description for each score in the indicator.

INDICATOR 20 Design, select, organize and use diagnostic, formative and summative assessment strategies consistent with curriculum requirements								
1	2	3	4	5	6	7	8	9
The teacher does not provide any form of assessment during the lesson.	The teacher attempts to incorporate assessment in the lesson without set criteria.	The teacher provides a limited range of assessment strategies but fails to address the learning goals.	The teacher provides a range of assessment strategies but only some are aligned with the learning goals.	The teacher provides a range of assessment strategies that address most of the learning goals.	The teacher provides assessment strategies consistent with the curriculum requirements.	The teacher integrates assessment strategies that engage learners in self- and peer-assessment.	The teacher fully integrates assessment strategies taking into account different learners' cognitive levels as well as their particular learning needs.	The teacher and learners collaboratively set and attain the learning goals using assessment strategies consistent with the curriculum requirements.
FEATURES OF PRACTICE								
1. There is no assessment or monitoring of students' learning. 2. The teacher does not demonstrate the ability to use assessment to measure learner progress.	1. The teacher does not provide a set of criteria to assess the learners' work. 2. The teacher does not provide a set of standards, e.g. rubric or checklist, to assess the learners' work and output.	1. The teacher uses assessment procedures focused on task completion and/or compliance rather than learner achievement of lesson purpose/objective.	1. The teacher uses a variety of assessment strategies, but some do not measure the intended learning outcomes. 2. The teacher uses procedures that yield only some evidence of learning.	1. The teacher uses a repertoire of assessment strategies which are aligned with the intended learning goals. 2. The teacher uses assessment procedures that draw out evidence of whether learners have learned the intended learning outcomes.	1. The teacher predominantly uses assessment strategies which are embedded as an integral part of the lesson and are aligned with the intended instructional or consistent with the content standards. 2. The teacher encourages the learners to assess and monitor the quality of their work against the assessment criteria and performance standards.	1. The teacher uses assessment strategies which engage learners in assessment criteria to self-monitor and reflect on their own progress. 2. The teacher prompts learners to frequently assess their own work and the work of their peers using assessment criteria embedded in teacher- or learners-generated rubrics, peer reviews, and/or reflection logs.	1. The teacher successfully uses multiple learner data and feedback to inform future instructional decision making and to differentiate instruction to address individual learning needs.	1. The teacher involves learners in developing self-assessment strategies to monitor academic goals. 2. The teacher requires learners to set their own instructional outcomes based on feedback. 3. The teacher provides learners with opportunities to evaluate and contribute to the development of criteria/rubrics.

CLARIFICATIONS

ASSESSMENT STRATEGIES:

DIAGNOSTIC

assessment used to identify each learner's strengths, weaknesses, knowledge, and skills prior to instruction, e.g., pretest, drills, review, anticipation guide, content knowledge boxes

FORMATIVE

assessment used to identify knowledge and/or skills that learners can hone/build on or need to improve, e.g., recitation (show of hands, response cards, happy/sad face), activities (games, tableau, exit cards), and seat works (reflection journal, exercises, practice)

SUMMATIVE

assessment used to identify learner achievement of the objectives of the lesson, e.g., written works (quizzes, essays), performance tasks (skills demonstration, group presentations, oral work)

INDICATOR 21 Use strategies for providing timely, accurate and constructive feedback to improve learner performance								
1	2	3	4	5	6	7	8	9
The teacher does not provide any feedback to help learners improve their learning.	The teacher attempts to provide feedback but does not result in improving students' learning.	The teacher rarely provides feedback that results in limited opportunities for learners to improve their learning.	The teacher occasionally provides feedback that results in opportunities for majority of the learners to improve their learning.	The teacher frequently provides feedback that results in opportunities for most of the learners to improve their learning.	The teacher consistently provides feedback that results in opportunities for all learners to improve learning and leads to assess their own progress.	The teacher consistently provides feedback that results in opportunities for all learners to improve learning and to assess their own progress and that of others.	The teacher adjusts and refines different forms of feedback grounded on students' learning needs.	The teacher creates and maintains a learning environment that supports learners' life-long learning through teacher-learners and learners-learners feedback.
FEATURES OF PRACTICE								
1. Learners receive no feedback. They have no idea if they are on the right track in achieving the intended learning outcomes.	1. Teacher's feedback is of poor quality and not oriented toward future improvement of learning. It lacks specificity or is untimely and inaccurate. 2. Feedback is dismissive, does not explain what went "wrong," and does not suggest a specific course of action for the learner to follow.	1. Teacher's feedback is superficial, not informative, and not constructive. 2. Feedback is directed to only some of the learners. 3. Teacher's feedback partially guides learners toward the intended learning outcomes and does not target students' strengths and weaknesses.	1. The teacher provides accurate feedback but sometimes absent when it is necessary. 2. Feedback is selective to some groups of learners. 3. The teacher falls short of addressing the learners' common need/ weakness.	1. The teacher provides accurate, timely, and constructive feedback, i.e. suggestions/ tasks/ activities/ clarifications, that fully guides most of the learners toward the intended learning outcomes.	1. The teacher provides substantive, specific, and timely feedback, and shares strategies to learners to improve their performance toward the intended learning outcomes.	1. The teacher establishes a routine for constructive feedback where learners can participate and respond productively. 2. The teacher provides opportunities for self and peer feedback that is specific and is focused on advancing their learning of the lesson on hand.	1. The teacher provides individualized, descriptive feedback that is accurate and actionable to help learners advance their learning. 2. The teacher uses varied forms of feedback that are accurate and specific which can maximize students' ability to learn.	1. The teacher consistently sets up a constructive learning environment that instills positive stance towards giving and receiving feedback which can be applied to real-life context.

CLARIFICATIONS	
FEEDBACK essential and culturally-appropriate written and/or oral information about learners' behavior/ performance/ output that can be used to raise awareness on their strengths and weaknesses as bases for improvement MAJORITY more than half MOST almost all, approaching 100%	RARELY seldom occurs OCCASIONALLY irregularly occurs FREQUENTLY often occurs CONSISTENTLY constantly occurs

Complete the table below. This is the most important part of this worksheet.

Indicator	Score and description that you have given (copy the description from the rubrics found above)	Your reasons (Explain thoroughly your observations that support the score that you have given)
(#20) The teacher designed, selected, organized and used diagnostic, formative and summative assessment strategies consistent with curriculum requirements	Score: 7 "The teacher integrates assessment strategies that engage learners in self- and peer-assessment."	1. Full Assessment Triad: The lesson features a seamless flow across diagnostic (Pose or Oppose?), formative (Think-Pair-Share and guided excerpt questioning), and summative (Polarity Map) assessments. 2. Construct Alignment: The Polarity Map Directly measures EN9LIT-1-1 by requiring students to extract textual evidence (Village Norms vs. Opposing Forces) and write an analytical justification linking binary opposition to themes. 3. Clear Criteria: A transparent 20-point analytic rubric (evaluating Identification of Opposites, Textual Evidence, Analysis/Justification, and Clarity) is provided directly on the student worksheet. 4. Self/Peer Engagement: Peer interaction is built into the Think-Pair-Share phase and post-map processing discussions.
(#21) The teacher used strategies for providing timely, accurate and constructive feedback to improve learner performance	Score: 6 "The teacher consistently provides feedback that results in opportunities for all learners to improve learning and leads to assess their own progress."	1. Immediate Oral Feedback: During the "Pose or Oppose?" activity and excerpt analyses, the teachers validate correct responses, affirm critical thinking (" <i>Exactly... Notice how quickly you were able to find contrasting meanings</i> "), and reframe incomplete answers in real time. 2. Guided Processing: After presenting student responses, teachers ask follow-up processing questions (" <i>What do these oppositions tell us about the society in The Lottery?</i> ") that help students refine their interpretations prior to independent writing.

MY REFLECTIONS AND INSIGHTS GAINED FROM THE LESSON OBSERVATION IN RELATION TO MY COURSE 2E-EDUC 4- ASSESSMENT OF LEARNING

This observation provided valuable insights into how assessment functions in an active classroom. It showed me that effective classroom assessment requires a similar level of strategic design. It is not merely about assigning grades at the end of a unit, but about using structured steps to help students build critical thinking skills.

A key takeaway from this observation is the value of embedding diagnostic assessment naturally into the opening phase of a lesson. The teachers did not start with heavy literary definitions. Instead, they used the "Pose or Oppose?" activity, where students imitated viral social media gestures to identify signs, meanings, and their opposites. This served as a low-stakes diagnostic tool that allowed the teachers to check prior knowledge about contrasting concepts before moving on to the literary text. It bridged the gap between the students' daily lives and the academic concept of binary opposition without making them feel overly evaluated.

The observation also highlighted how formative assessment and real-time feedback prepare students for individual work. As the class transitioned from media examples like Avengers: Endgame to primary excerpts from The Lottery, the teachers used Think-Pair-Share and targeted questioning to guide analysis. They provided immediate feedback by validating strong points, clarifying misunderstandings, and asking follow-up questions about opposing values like Tradition vs. Change. By the time students received "The Polarity Map" worksheet, they had already practiced the required analytical skills. Furthermore, including a 20-point rubric directly on the assignment gave students clear performance criteria to guide their writing and self-evaluation.

Overall, this observation broadened my perspective on the role of assessment in the learning process. Assessment is most effective when it is aligned with learning competencies and used continuously to support student progress. Tasks like the Polarity Map do more than evaluate recall; they require students to locate textual evidence and explain thematic connections in writing. As I progress in the CTP program, I will apply these insights to design assessments that clearly measure student learning while actively supporting their growth.
