

2E-EDUC 3 – Principles and Methods of Teaching
Integrated Lesson Plan across Curriculum (Template)

Term 1 SY 2026 - 2027

Group No. and Name: Group 2 English Group

Names of Developers/Writers:

Leader: Ivan Dione Soria

Members:

1. Rose Marianne Louis Gardoce
2. Donna Jane Panaguiton
3. Kenn Arcenal

Date Submitted: August 25, 2026

Note: The Online Demonstration teaching for this lesson plan is scheduled on September 8 and 15, 2026.

Weekly Lesson Title (Think of a unique, creative, and catchy title to capture the week-long lesson integrating new literacy/21st century skills and SDGs)	Subject /Learning Area and Grade Level	Number of Days
“Climate Words, Climate Action”	Grade 10 English	5

Unit /Weekly Lesson Overview
Briefly describe what the weekly lesson is all about in terms of content/topics, the activities students will undergo, and expected outputs/projects to develop or create to demonstrate their understanding. Highlight the competencies and/or skills of the new /21 st century literacies and other 21st-century skills being integrated into the subject/learning area.
“Climate Words, Climate Action” helps learners understand climate change through reading, discussion, and writing. They will analyze texts, learn key terms, and create a Climate Information Brief while building critical thinking, communication, teamwork, research, and digital skills.

Subject 1: English	
Grade Level: 10	
Quarter and Week Number: Quarter 3 and Week 2	
Topic/Subtopic: The use of discipline-specific words, voice, technical terms in research, and the conceptual, operational, and expanded definitions of words	
Content Standards (copy from the MATATAG Curriculum Guide of the Subject/Learning Area)	The learners demonstrate their multiliteracies and communicative competence in evaluating informational texts (research report [stage 1] based on literature review) and transactional texts (letter of application) for clarity of meaning, purpose, and target audience as a foundation for publishing original informational and transactional texts.

Performance Standards (copy from the MATATAG Curriculum Guide of the Subject/Learning Area)	The learners analyze the style, form, and features of informational texts (research report based on literature review) and transactional texts (letter of application); evaluate informational and transactional texts for clarity of meaning, purpose, and target audience; and compose and publish original multimodal informational texts (research report [stage 1] based on literature review) and transactional texts (letter of application) using appropriate forms and structures that represent their meaning, purpose, and target audience.
Learning Competencies (copy from the MATATAG Curriculum Guide of the Subject/Learning Area)	The learners will: EN10INF-III-3 Analyze the use of discipline-specific words, voice, technical terms in research, and conceptual, operational, and expanded definitions of words.

	Applications (list them/add link) 1. Canva / Microsoft PowerPoint / Google Slides

	2. Mentimeter
	Other Instructional Aids (list them) 1. Board/whiteboard and markers 2. Worksheet (Compare-Contrast) 3. Printed excerpts or digital copies of texts 4. Highlighters or annotation tools 5. Vocabulary/analysis worksheet 6. Internet for e-dictionary or LLM access
Link to Subject 2: Science	
Grade Level: 10	
Quarter and Week Number: Quarter: 1 Week Number: Not Identifiable	
Topic/Subtopic: Global Warming and Climate Change	
Content Standards (copy from the Curriculum Guide/ K-12 Curriculum or MATATAG of the Subject/Learning Area)	1. Current models explain tectonic plate movement as part of a gravity-driven convection system that pushes young hot plates away from spreading ridges and pulls old cold plates down into subduction zones. 2. Plate movements and continental evolution account for the major surface features of the Earth. 3. Climate change and its impacts on the environment and people pose serious challenges which require solutions and action at local and global levels.

	4. The rich natural resources of the Philippines require sustainable management.
Performance Standards(copy from the Curriculum Guide/ K-12 Curriculum or MATATAG of the Subject/Learning Area)	By the end of the Quarter, learners describe and explain the geologically dynamic nature of the Philippine Archipelago in relation to its plate tectonic setting and use models to explain the Earth's structures, movements, and natural events that occur. They use critical thinking and modeling to explain mechanisms that have contributed to the current distributions of continents and make predictions about changes that can be expected in the future. Learners gather information from secondary sources to describe rapid changes that are occurring in local and global climate patterns and propose solutions to address these changes at the local and global levels by drawing on awareness, responsible personal behavior to conserve materials and energy, and through the better societal management of the natural resources of the country.
Learning Competencies (copy from the Curriculum Guide/ K-12 Curriculum or MATATAG of the Subject/Learning Area)	The learners will: No.11. Identify local impacts of global climate change.
Learning Resources Needed	Internet/Web-Based (list them/ add link) N/A
	Applications (list them/add link) N/A

	Other Instructional Aids (list them) N/A
Mapping the Integration of New /21st Century Skills/SDGs with School Subjects 1 and 2 New Literacy Focus: Digital Literacy, Science Literacy, Environment Literacy, Social Literacy 21st Century Skills Focus: Research, Critical Thinking, Communication Skills, Technology Integration SDG Focus: SDG #4 Quality Education, SDG #13 Climate and Action, SDG #5 Gender Equality, SDG #9 Industry, Innovation and Infrastructure, SDG #17 Partnerships for the Goals	

Teaching and Learning Procedure			
Lesson Plan Parts (Note from the Weekly Plan the group has prepared, the group will choose which day the group will develop a full-blown. Detailed lesson for Demonstration teaching.			
Subject 1 : English Topic/Content: Global Warming and Climate Change Sub-topic 1: The use of discipline-specific words, voice, technical terms in research, and			

the conceptual, operational, and expanded definitions of words			
Learning Competencies (copy from the Curriculum Guide /K-12 curriculum or MATATAG of the subject you will do lesson demonstration)	EN10INF-IV-3 – Analyze the use of discipline-specific words, voice, technical terms in research, and the conceptual, operational, and expanded definitions of words.		
Lesson Objectives – State in SMART (if unpacked from Lesson Competencies)	By the end of the lesson, learners should be able to: 1. Compare the use of discipline-specific words and technical terms in informational and research texts addressing local impacts of global climate change. 2. Analyze how technical terms, definitions, and academic voice contribute to the clear and precise communication of information about local climate-change impacts.		

	3. Extract and synthesize significant information from two climate-related sources to produce a Climate Information Brief on a local impact of global climate change.		
Developmental Activities/Procedure (Note approximate/ allot the time for each section of the lesson flow)	Teacher's Activity	Student's Activity	Comments/Suggestions for Improvement by the Observer Group
A. Preliminaries Include Activating Prior Knowledge (Review/Recall) and Presentation of Lesson Objectives	I. Activating Prior Knowledge (10 minutes) The Climate Word Mystery 1. The teacher begins by recalling the previous documentary assignment on <i>An Inconvenient Truth</i> . The teacher explains that she has collated the unfamiliar terms submitted by the students through	1. Students access the Mentimeter link provided by the teacher and answer the given climate scenarios within five minutes based on their current understanding. If they experience technical issues and	

	Google Forms and selected five words relevant to the local context: greenhouse gases, carbon dioxide, precipitation, drought, and sea level. 2. To evaluate prior knowledge, the teacher creates a short diagnostic activity on Mentimeter featuring local climate scenarios, each offering two answer choices. 3. The teacher shares the access link with the class. To ensure inclusivity, the teacher will also project the questions on the main screen as an alternative for students facing technical issues. The teacher then allocates five minutes for everyone to complete the quiz. 4. While the students work, the teacher monitors the live dashboard to gauge which technical terms are completely unfamiliar to the class.	cannot access the link, they share their answers in the Zoom chat instead. 2. Once the quiz concludes, students volunteer to read and answer each question aloud to help identify and correct any shared misconceptions. 3. After learning the correct meanings and importance of understanding technical and scientific terms, students should keep these vocabulary words in mind, as they will be essential for understanding the whole lesson.	
--	--	--	--

	5. Once the quiz concludes, the class reviews each question to clarify misconceptions. The teacher invites student volunteers to read a question and share their answer, followed by a brief explanation from the teacher to reinforce the correct concept. 6. Lastly, the teacher emphasizes the importance of understanding technical and scientific terms when interpreting information about climate change and connects the activity to the focus of the lesson.		
B. Lesson Proper (Depends on your Instructional Design/ Teaching Method/Approaches) • 5-7 E Inquiry Model	I. ENGAGE (10 Minutes) Climate Vocabulary 1. Divide learners into small groups and provide two climate-related excerpts addressing the same <i>climate issue</i> in the Philippines: one news	• Work cooperatively to identify and highlight discipline-specific and technical terms. • Complete the compare-and-contrast worksheet using evidence from both texts.	

	report and one technical report/press release. 2. Ask groups to skim both texts and highlight discipline-specific and technical terms related to the climate issue. 3. Give each group a compare-and-contrast worksheet. 4. Ask groups to briefly share their observations, focusing on: • What technical or scientific terms did you notice? • Which text uses more specialized language? • Who do you think the intended audience is for each text? • Why might the writers use different terms or styles even though they discuss the same climate issue? 5. Tell learners that they will examine these differences more closely in the next activity to understand how text type, purpose, and target audience influence the way information is presented.	• Discuss how context, voice, and terminology affect meaning and clarity. • Use an online dictionary or LLM to explore conceptual, operational, and expanded definitions. • Share technical vocabulary during the round-robin exchange. • Revise the informal climate statement using precise, discipline-specific terminology and an appropriate academic voice. 1. Form small groups and receive the two excerpts addressing the same Philippine climate issue. 2. Skim both texts and highlight discipline-specific and technical terms related to the climate issue.	
--	---	---	--

	II. EXPLORE (10 Minutes) 1. Learners use a worksheet to identify similarities and differences in the vocabulary, voice, and writing style between the	3. Use the worksheet to record similarities and differences in the language and presentation of information in the two texts. 4. Share their observations and explain their answers based on the language, terminology, and presentation of information in the texts. 5. Recognize that the presentation of scientific information may vary depending on the text type, purpose, and target audience. 1. Learners examine the two texts and identify similarities and differences in vocabulary, voice, register, and writing style.	
--	--	--	--

	news report and the technical report. Guide Questions: • Which words are specific to global warming and climate change? • Which text contains more technical words? • How does the surrounding sentence help explain the term? • What might happen if technical terms were replaced with vague words? • What local impact of the climate issue is identified in the text? 2. Briefly process learners' responses and connect their observations to the way scientific information is communicated in different texts.	2. Learners identify climate-related terms and explain the scientific phenomenon or concept represented by each term. 3. Learners locate evidence in the texts and identify which claims or statements are supported by that evidence. 4. Learners identify the effects of the climate issue on people, communities, or the environment in the Philippines and determine which information is essential to understanding the issue. 5. Learners use context clues to infer the meaning of technical terms and discuss how replacing precise terminology with vague words may affect the accuracy and clarity of the information.	
--	--	--	--

	III. EXPLAIN (10 Minutes) Discipline-Specific Vocabulary and Formal Voice 1. The teacher discusses how informational and research texts vary in voice, writing style, and vocabulary register, and discipline-specific vocabulary, emphasizing that writers select language based on their purpose and target audience. 2. Learners use online dictionaries or appropriate digital tools to find operational or expanded definitions of selected technical terms identified	6. Learners share their findings and formulate initial observations about the relationship among technical vocabulary, scientific information, text type, purpose, and audience. 1. Listen to the discussion and relate the concepts to their observations from the two texts. 2. Learners use online dictionaries or appropriate digital tools to find the general, operational, or expanded definitions, as applicable, of the selected technical terms 3. Learners examine their initial definitions and identify information that may require further clarification or verification.	
--	---	---	--

	in the texts. 3. The teacher reminds learners that dictionary definitions provide general meanings but may not fully explain the scientific meaning or context of a technical term. 4. Learners verify their initial definitions by consulting credible scientific sources, such as government agencies, scientific organizations, or reputable educational institutions. They compare the information from the dictionary with the scientific source and identify any additional or context-specific information. 5. Learners record the verified definition, the scientific source consulted, and one example of how the term is used in the climate-related texts.	4. Learners consult credible scientific sources and compare the information with the definitions obtained from the online dictionary. 5. Learners record the verified definition, source consulted, and an example of how the term is used in the climate-related texts. 6. Learners share selected findings and explain how consulting a credible scientific source helped them understand the term more accurately.	
--	---	--	--

	IV. ELABORATE (15 Minutes) From Climate Information to Research Language 1. Conduct a three-round round-robin knowledge exchange. One representative from each group visits another group to explain three technical terms, their meanings, and how they are used/operationalized in research writing. 2. Group members remaining behind explain their three terms to the visiting learner. 3. Remind learners to distinguish between a conceptual definition and an operational definition, when applicable. 4. Present the application example: "The Earth is getting hotter because of gases people put into the	1. Prepare three technical terms, including their meanings, scientific context, and examples from the texts. 2. One representative visits another group and explains the selected technical terms and their meanings. 3. Explain the conceptual meaning of their terms and, when applicable, describe how the concept may be measured, observed, or identified in a particular research study. 4. Revise the statement using more precise, discipline-specific terminology and explain the changes they made.	
--	---	--	--

	air.” Ask learners to replace vague language with more precise terminology appropriate for research-based writing. 5. Process selected responses and emphasize that technical vocabulary must be used accurately and appropriately within its scientific context. 6. The student will submit their output to the teacher.	5. Compare their revisions with the example and identify the terms or phrases that make the statement more precise and appropriate for research-based writing. 6. Share their revised statements and explain why their chosen terminology is more precise and appropriate. Afterward, they will submit the output to the teacher.	
--	--	---	--

	V. EVALUATE (10 Minutes) Rewrite It Right 1. The class will be presented with an informal statement about climate change and global warming. 2. Learners revise the statements into formal statements appropriate for a news report or technical report, using appropriate discipline-specific vocabulary.	1. Read and analyze the informal statement. 2. Revise the statement using appropriate discipline-specific vocabulary, formal language, and objective voice. 3. Determine which language and terminology are appropriate based on the intended text type, purpose, and audience. 4. The students will type their revised statements. 5. The students will be given short feedback.	
C. Closure Activities	I. CLOSURE ACTIVITIES (5 minutes)		

	1. Briefly describe the overall effects of local climate change impacts from the references used in the discussion. 2. Ask learners to state one technical climate term and state how precise terminology improves clarity and credibility. 3. Recap the relationship among discipline-specific vocabulary, technical terms, objective voice, context, and precise definitions. 4. Preview the next task: evaluating the formal quality of climate-related statements.	1. Listen to the concluded effects of the local impacts of climate change from the used references in discussion. 2. Share one newly learned technical term. 3. State how precise terminology improves clarity and credibility. 4. Listen to the transition to the assessment/homework.	
--	---	--	--

D. Assessment/Evaluation	I. ASSESSMENT / EVALUATION (10 Minutes) Formative Group Exit Task 1. Give each group five informal statements about climate change and global warming. 2. Instruct groups to rewrite each statement into a formal statement appropriate for a news report or technical/research report, using vocabulary learned in the lesson or other accurate technical terms. 3. The teacher will announce that they will submit the output after a day of discussion.	1. Collaboratively rewrite the five informal statements. 2. Apply accurate technical terms and an appropriate formal/academic voice. 3. Submit the output after a day of discussion.	
E. Assignment /Homework/Project/Output	I. ASSIGNMENT / HOMEWORK / PROJECT / OUTPUT Peer Assessment from Formative Group Exit Task		

	1. The teacher will explain that after the five statements are submitted, they will critique each group's output individually. 2. Learners will examine the group statements from the Formative Group Exit Task using a rubric and assess the accuracy and appropriateness of technical terms, formal voice, and overall coherence and cohesion. 3. Each statement is scored using the stated 3-point scale below:  RUBRIC FOR THE ...			1. Individually assess the statements using the provided criteria. 2. Identify strengths and areas for improvement in the use of technical terms and formal voice by giving it a score and submitting it to the teacher on or before the deadline.	
F. Teacher's Remarks	Note observations on any of the following areas:	Effective Practices	Problems Encountered		
	Strategies explored				

	Materials /Aids used				
	Technolog y used				
	Learner engageme nt/ interaction				
	Others				
G. Teacher's Reflections	Reflection guide or prompt can be on: ▪ Principles behind the teaching What principles and beliefs informed my lesson? Why did I teach the lesson the way I did?				
	▪ Students What roles did my students play in my lesson? What did my students learn? How did they learn?				
	▪ Ways forward What could I have done differently? What can I explore in the next lesson?
