

2E- EDUC - 3 - Principles and Methods of Teaching

Worksheet- 21st Education Challenges, My Understanding of 21st Century Skills, New Literacies and SDGs

Name: Rose Marianne Louis M. Gardoce

Date: August 17, 2026

Part 1: 21st Century Education Challenges

Direction:

1. In the video by Pear Tree Education, Inc. "21st century education: What should 21st century learning consist of? Please access at this link: <https://www.youtube.com/watch?v=ypSNpiW2qRs&t=1s>, enumerate and describe the features of 21st century education.
7 different key features
 1. Integrated subjects – combining language arts, math, science and social sciences. It is taught around themes. For instance, the topic on Environment leads itself to talking about science and social sciences, math and language art.
 2. Technology – offers an additional tool in education. For instance, technology allows students to do a different way of reading and writing, adapting to real-world scenarios.
 3. Hands-on Learning – the best way to learn is by doing it hands-on rather than just looking at TV program or reading a book. It observes "learning by doing". It is an engaging way of teaching.
 4. Collaboration – helps recognize the strengths of other people. Working with them makes things easier and faster. It requires a group of people sharing a common interest to succeed together.
 5. Student-Centered Learning – "Bloom's Taxonomy" believes that remembering information is the lowest form of intelligence. On the other hand, understanding, applying, creating new ideas, evaluating opinion of other people analyzing things are a higher form of intelligence. Learning is extremely superficial if it mostly based around names, dates, formulas, facts of events. Learning does not occur just by sitting passively but rather when doing things. The only way to be intelligent is being able to apply ideas learnt in the classroom. "Applying knowledge has to be taught" which means teaching students skills that will allow them make use of the knowledge to empower themselves.
 6. Innovation – Art as one aspects of creativity is often viewed as a secondary subject. It deals with encouraging students to come up with new idea and not merely copying someone's idea. It breaks the practice of traditional education that leaves no room for error which stops students from thinking creatively.
 7. Entrepreneurship – Combination of all the features:
 - a. Applying education to real life
 - b. Getting better through collaboration
 - c. Coming up with new ideas
 - d. Testing ideas out willingly making mistakes

2. In the video, "Learning and 21st Century Skills" accessible at this link: <https://www.youtube.com/watch?v=7a6hRKfwSr8>, it mentioned about "21st century skills gap" that many students graduate from universities such as the following:
- Oral communication
 - Critical and problem solving
 - Professionalism and work ethic
 - Teamwork and collaboration
 - Working on diverse teams
 - Applying technology
 - Leadership and project management
- A. Choose at least five (5) of the above and make justifications that they are true and existent by citing situations to support your answer. Then, suggest teaching strategies how should you as a future teacher develop the skills in your students to address the gap. Complete the table below.

21 st century skills gap	Provide justifications/Cite Situations	Suggested Teaching Strategies to address the skills gap
1. Oral communication	Learners tend to be reluctant to participate in classroom discussions and activities conducted in English mainly due to fear of being judged, criticized or being laughed at by others because of grammar mistakes or mispronounced words. This results to an observable lack of enthusiasm to express themselves in English.	As a future teacher, I should understand the specific fears experienced by my students and addressing it by creating opportunities for students to practice English in a supportive classroom environment where students are encouraged to express their ideas without fear of being judged. Furthermore, I should be able to give constructive feedback which can help improve their confidence and consequently, their communication skills.
2. Critical and problem solving	Students sometimes rely heavily on memorizing information instead of analyzing situations and finding solutions. For example, when given a real-life problem with no direct answer in the textbook, some students may have difficulty deciding	I should be able to implement targeted strategies and create a learning environment that promotes and cultivates inquiry, analysis, and reflection. To achieve this, I should make students analyze, evaluate and make connection by asking

PHILIPPINE NORMAL UNIVERSITY

call@pnu.edu 

	what steps to take. This indicates a need to strengthen their critical-thinking and problem-solving skills.	open-ended questions during the lesson. To help students see the relevance of their learning, I should create activities that will allow them to relate concepts to current events, social issues that they are mainly concerned with.
3. Professionalism and work ethic	I observe that some students struggle with punctuality, completing assignments on time, following instructions, and taking responsibility for their work. For example, a student may frequently submit projects late or depend on classmates to complete assigned tasks. These situations demonstrate a gap in responsibility, discipline, and work ethic.	I can develop professionalism by assigning clear responsibilities, deadlines, and performance expectations. Students can use checklists, schedules, and progress-monitoring activities to manage their responsibilities. I can also model professionalism by being punctual, prepared, fair, and respectful. Recognizing students who demonstrate responsibility and perseverance can further encourage positive work habits.
4. Teamwork and collaboration	Students have different personalities and abilities, so conflicts may occur when they work in groups. For example, one student may do most of the work while others remain inactive, or group members may disagree and fail to listen to one another. These situations show that students need stronger teamwork and collaboration skills.	I should make sure that I implement cooperative learning and structured group activities where every student has a specific role, such as leader, researcher, recorder, or presenter. I can teach students how to listen actively, respect different opinions, resolve conflicts, and make group decisions. Peer evaluation can also help students reflect on their contributions to the team.
5. Leadership and project management	Some students may have difficulty taking initiative, organizing tasks, delegating responsibilities, or guiding a group toward a common goal. For example, when students are assigned a	I can give students opportunities to plan and manage projects from beginning to end. Students can set goals, divide tasks, create timelines, assign responsibilities, monitor

	group project, they may wait for the teacher to tell them what to do rather than planning the project themselves. This indicates a gap in leadership and project-management skills.	progress, and present their final outputs. Rotating leadership roles among group members will allow different students to practice decision-making, responsibility, communication, and problem-solving.
--	---	---

3. In the video, “Learning and 21st Century Skills” accessible at this link: <https://www.youtube.com/watch?v=7a6hRKfwSr8>, it presented global challenges in the 21st century such as :
- Interlinked financial and economic systems (globalization)
 - Growing disparity in the world between rich and poor leads to social tension, extremism, and a less safe world for everyone
 - Ballooning world population
 - Increasing consumption of the earth’s material and energy resources
 - Climate change and other threats to the natural world

A. Complete the table below.

Global challenges	Problems/Issues in the Philippines	Suggested Teaching Strategies to help address the identified problems/issues
1. Interlinked financial and economic systems (globalization)	While globalization Job displacement due to global competition, migration of skilled workers (brain drain), dependence on imported goods, unequal access to technology	Integrate financial literacy, entrepreneurship education, digital literacy, and project-based learning. Encourage students to support local industries through research and community projects.
2. Growing disparity in the world between rich and poor leads to social tension, extremism, and a less safe world for everyone	Poverty, income inequality, limited access to quality education and healthcare, unemployment, social exclusion	Promote inclusive education, values education, cooperative learning, service-learning, and discussions on social justice, equality, and responsible citizenship.
3. Ballooning world population	Overpopulation in urban areas, overcrowded schools, housing shortages,	Teach responsible parenthood, reproductive health education, population education, and

	unemployment, pressure on public services	sustainable community planning through inquiry-based and problem-solving activities.
4. Increasing consumption of the earth's material and energy resources	Overpopulation in urban areas, overcrowded schools, housing shortages, unemployment, pressure on public services	Integrate environmental education, the 3Rs (Reduce, Reuse, Recycle), school recycling programs, energy conservation campaigns, and experiential learning through community clean-up activities.
5. Climate change and other threats to the natural world	Stronger typhoons, flooding, sea-level rise, drought, biodiversity loss, agricultural damage, increased disaster risks	Use disaster risk reduction and management (DRRM) education, climate change education, field-based learning, environmental projects, tree planting, and disaster preparedness drills to build resilience and environmental stewardship.

4. From your research and readings, what are 21st century skills?

The Glossary of Education Reform defines it as a broad of set of knowledge, skills, work habits, and characteristic traits that are believed to be critically important to survive in today's world, particularly in collegiate programs, contemporary careers and workplaces.

It is broken into three categories:

- I. Learning skills: (4Cs)
 - a. Critical thinking – objective analysis and evaluation of an issue in order to form judgment. Students need the ability to think analytically, which includes proficiency with comparing, contrasting, evaluating, synthesizing, and applying without instruction or supervision. Analytical thinkers see data and information in many different dimensions, and from multiple angles. They are adept at conceptualization, organization and classification, and knowledge synthesis. It empowers students to make effective and level-headed decisions.
 - b. Creativity – the use of imagination or original ideas to create something; inventiveness. Creativity is equally important as a means of adaptation. This skill empowers students to see concepts in a different light, which leads to innovation. Students need to be able to think and work creatively in both digital and nondigital environments to develop unique and useful solutions.

- c. Collaboration – the action of working with someone to produce something. It means getting students to work together, achieve compromises, and get the best possible results from solving a problem. All participants have to be willing to sacrifice parts of their own ideas and adopt others to get results for the team. That means understanding the idea of a “greater good”. Connection and collaboration with others are essential not only to their learning but their mental and emotional health.
- d. Communication – (both written and oral) the imparting or exchanging of information by speaking, writing, or using medium. Students must be able to communicate in multiple multimedia formats (through video and imagery) as effectively as they do with text and speech. Encouraging students to develop and refine their communication skills will serve them well in both their personal and professional lives. It’s crucial for students to learn how to effectively convey ideas, because effective communication eliminates confusion.

II. Literacy skills: (IMT skills)

- a. Information Literacy – understands facts, figures, statistics, and data. It is the foundational skill. It helps students understand facts, especially data points, that they’ll encounter online. It teaches them how to separate fact from fiction. In an age of chronic misinformation, finding truth online has become a job all on its own. It’s crucial that students can identify honesty on their own. Otherwise, they can fall prey to myths, misconceptions, and outright lies.
- b. Media Literacy – the ability to access, analyze, evaluate, create, and act using all forms of education. It is the practice of identifying publishing methods, outlets, and sources while distinguishing between the ones that are credible and the ones that aren’t. It is understanding the methods and outlets in which information is published. Just like the previous skill, media literacy is helpful for students to find trustworthy sources of information. With it, they can learn which media outlets or formats to ignore or which ones to embrace.
- c. Technology Literacy - the ability to use, manage, understand, and assess technology. It is understanding the machines that make the Information Age possible Technology literacy teaches students about the machines involved in the Information Age. As computers, cloud programming, and mobile devices become more important to the world, the world needs more people to understand those concepts. It gives students the basic information they need to understand what gadgets perform what tasks and why. As a result, students can adapt to the world more effectively and can play an important role in its evolution.

III. Life skills:

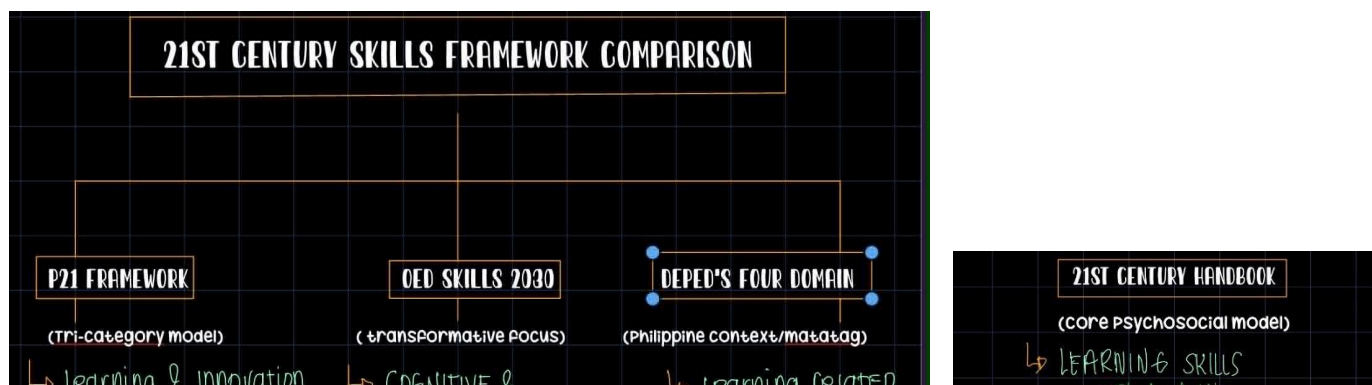

- a. Flexibility – the willingness to change or compromise. Knowing when to change, how to change, and how to react to change is a crucial skill to a student’s long-term success. Clay Parker, president of the Chemical Management Division of BOC, explained that anyone who works at BOC Edwards today “has to think, be flexible, change, and use a variety of tools to solve new problems. We change what we do all the time. I can guarantee the job I hire someone to do will change or may not exist in the future, so this is why adaptability and learning skills are more important than technical skills.”
- b. Leadership – the action of leading a group of people or an organization. It is someone’s penchant for setting goals, walking a team through the steps required, and achieving those goals collaboratively. It gives ambitious students the expertise they need to grow professionally and lead whole corporations. Leadership alone isn’t enough to get ahead though.
- c. Initiative – the power or opportunity to act or take charge before others do. This is one of the hardest skills to learn and practice. Initiative often means working on projects outside of regular working hours. It is an attribute that earns rewards. It’s especially indicative of someone’s character in terms of work ethic and professional progress. That goes double when initiative is practiced with qualities like flexibility and leadership.

Teachers need to adapt teaching methods to effectively integrate these skills into the curriculum.

Complex Communication

Expert Thinking

5. From the compiled materials, articles, and internet sources such as the following, <https://www.panoramaed.com/blog/comprehensive-guide-21st-century-skills>; <https://www.youtube.com/watch?v=tRgx5HCHwXg>; https://www.youtube.com/watch?v=F0m2ruDI_Y8, using a concept map, mind-map or thinking map, or other representations, make a comparison of the various definitions and categories of 21st century skills such P21 Framework definition, OECD 21st Century learning, 21st Century skills handbook, Four Domains DepEd 21st Century skills.

New Literacies / 21st Century Skills and Awareness of the Current World Problems in Relation to the 17 UN SDGs : Entry Point for Integration into the School Curriculum (as Framework for “Project Work/Developing Creative and Integrated Lesson Plans)

Part 1. Directions

- Reflect on the New/21st Century Literacies (i.e. Multicultural and Global Literacy, Media Literacy, Cyber/Digital Literacy, Social Literacy, Financial Literacy, Ecological Literacy, Arts and Creativity Literacy, and Science Literacy).

A. Looking at the Philippine National Problems/Issues in the Perspectives of New Literacies for Integration in the School Curriculum

New/21st Century Literacies	Current problems and issues associated /related to the new literacies in the country today	List of the Most Suitable School Subjects or Topics as entry points for integration	Suggested possible Actions/ Teaching and Learning Approaches/Methods/Strategies (as ways of integration) to address the identified problems
Globalization and Multicultural Literacy	Cultural stereotyping, discrimination, cultural misunderstanding, loss of appreciation for local cultures, and challenges in adapting to a globalized society	Araling Panlipunan: globalization and culture; English/Filipino: multicultural literature; MAPEH: Philippine and indigenous culture	Multicultural education, comparative cultural activities, intercultural dialogues, role-playing, collaborative projects, and use of diverse texts
Media Literacy	Fake news, misinformation/disinformation, clickbait, biased reporting, manipulated content, and difficulty	English: evaluating texts and sources; Araling Panlipunan:	Source evaluation, fact-checking activities, media analysis, lateral reading, inquiry-based learning, and creation of responsible media content

call@pnu.ed

	identifying credible sources	current events; ICT: information evaluation	
Cyber/Digital Literacy	Cyberbullying, online scams, phishing, privacy concerns, excessive screen use, irresponsible social media use, and misuse of AI	ICT/TLE: digital citizenship; English: online communication; Values Education: digital ethics	Digital citizenship education, case analysis, simulations, guided AI use, cybersecurity activities, and discussions on privacy and online ethics
Social Literacy	Bullying, discrimination, social conflict, lack of empathy, polarization, and difficulty communicating respectfully with others	Values Education: empathy and respect; English/Filipino: communication; Araling Panlipunan: citizenship and society	Cooperative learning, role-play, dialogue circles, peer mediation, service learning, collaborative problem-solving, and perspective-taking activities
Financial Literacy	Poor budgeting, impulsive spending, debt, financial scams, limited knowledge of saving/investing, and consumer vulnerability	Mathematics: budgeting, percentages, interest; TLE: entrepreneurship; Araling Panlipunan: economics	Budgeting simulations, financial decision-making activities, problem-based learning, entrepreneurship projects, and analysis of advertisements
Ecological Literacy	Improper waste management, plastic pollution, deforestation, biodiversity loss, pollution, climate change, and environmental degradation	Science: ecosystems and climate change; Araling Panlipunan: human-environment relationships; TLE: waste management	Project-based learning, environmental investigations, waste audits, community-based projects, environmental campaigns, and citizen-science activities
Arts and Creativity Literacy	Limited opportunities for creative expression, undervaluing of the arts, unequal access to arts education, and loss or	MAPEH: visual arts, music, theater; English/Filipino: creative writing;	Arts-based learning, design thinking, creative projects, performance tasks, interdisciplinary activities, and community/cultural projects

	commercialization of cultural heritage	Araling Panlipunan: cultural heritage	
Science Literacy	Scientific misinformation, misconceptions, difficulty interpreting evidence and data, and confusion between scientific facts and opinions	Science: scientific inquiry; Mathematics: data interpretation; English: scientific texts; Araling Panlipunan: science and society	Inquiry-based learning, experiments, investigation, data analysis, evidence-based argumentation, problem-based learning, and evaluation of scientific claims

Why is it important to be aware of the current problems today in relation/inherent to the new literacies?

It is important to be aware of current problems because **new literacies are closely connected to the realities and challenges that learners encounter in everyday life**. Issues such as misinformation, cyberbullying, financial scams, cultural misunderstanding, environmental degradation, and scientific misinformation require learners to have more than basic knowledge. They need to be able to **critically evaluate information, communicate responsibly, make informed decisions, and apply what they learn to real-life situations**. For teachers, understanding these issues helps ensure that the curriculum remains **relevant, responsive, and contextualized**, while preparing learners to become responsible and active members of society.

1. What do you think are the challenges, problems or concerns that you will encounter teaching or integrating the new /21st century literacies in your lessons?

One challenge I may encounter is the limited access to technology, reliable internet, and other learning resources, which may create differences in students' opportunities to participate. I may also encounter varying levels of digital and information literacy among learners, as well as limited time to integrate several new literacies into an already demanding curriculum. Another concern is keeping up with the rapid changes in technology, social media, artificial intelligence, and online information, which requires teachers to continuously update their knowledge and skills. There may also be concerns about misinformation, online safety, privacy, plagiarism, and the responsible use of AI. Therefore, I need to ensure that the integration of new literacies is purposeful and aligned with the learning competencies, while providing inclusive and meaningful activities that allow students to apply these skills to authentic real-world problems.

Part 2. Direction:

1. Study very well and understand the concept of Sustainable Development and the 17 United Nations Sustainable Development Goals(SDGs) from different sources such as

<https://sdg.neda.gov.ph/sdgs/>

<https://www.youtube.com/watch?v=Vo6k2rRhXTU/>

<https://www.youtube.com/watch?v=Tu-ijw4dLzo/> ,

<https://www.youtube.com/watch?v=FRZiXdL30d4>

2. Be aware of the Philippine Development Plan 2023-2028 at this link:

<https://www.youtube.com/watch?v=zt7pNmDnF98>

3. Individually accomplish the tables below and upload in ePNU.

+++++

Brief Information on SDGs?

The Sustainable Development Goals (SDGs) are also known as the Global Goals. The SDGs are new, universal set of goals, targets and indicators that UN member states will be expected to use to frame country agendas and policies over the next 15 years. It consists of 17 goals, 169 targets and 232 unique indicators. The SDGs is a comprehensive set of goals recognizing the connections between the people and the planet, comprised of 169 targets, integrated and indivisible to balance the three dimensions of sustainable development: the economic, social and environmental.

There are 244 indicators listed in the final indicator. However, since nine indicators repeat under two or three different targets, the actual total number of individual indicators in the list is 232.

LEAVE NO ONE BEHIND. This is what guided world leaders of 193 countries to solving the globe's most pressing problems of today.

Poverty. Hunger. Inequality. Climate Change. The Millenium Development Goals (MDG) were on its 15-year deadline, and although it was a success, people knew that there was a need to continue the legacy of the MDG and build on a more sustainable future— not only for the generation today, but for the future generations to come.

As a result, the United Nations, along with 193 countries of different backgrounds and cultures, adopted the 2030 Agenda for Sustainable Development, with 17 SDGs at its core.

The phrase Leave No One Behind was the guiding principle for these goals, and was actually the official motto set by the United Nations. The SDGs was meant to be inclusive, for everyone. It was meant to provide a comprehensive roadmap— a guide for us to achieve the future we want. A future where everybody is able to have food in their tables with their families, a future where employment is attainable to everyone, and a future where citizens do not live on less than \$1.25. A future where our natural resources are taken care of. This is the future we want.

The Philippine Development Plan (PDP) is the blueprint of the government where priorities of the political leadership are translated into policy and strategy framework and, then, into

programs and projects. From policy to action, the PDP reflects all of the 17 SDGs. The integration of the SDGs in the PDP is essential, as this document serves as a guide to the national budget planning and appropriations (which goes through Congressional Budget Hearings). It is worth noting that actions taken to achieve the SDGs should be viewed as complementary, if not concurrent, activity with the implementation of the PDP.

The Philippine Development Plan 2023-2028 is a plan for deep economic and social transformation to reinvigorate job creation and accelerate poverty reduction by steering the economy back on a high-growth path. This growth must be inclusive, building an environment that provides equal opportunities to all Filipinos, and equipping them with skills to participate fully in an innovative and globally competitive economy.

ENSURE INCLUSIVE AND EQUITABLE QUALITY EDUCATION AND PROMOTE LIFELONG LEARNING OPPORTUNITIES FOR ALL

First, the bad news on education. Poverty, armed-conflict, and other emergencies keep many, many kids around the world out of school. In fact, in developing regions, kids from the poorest households are four times more likely to be out of school than those of the richest households. Now for some good news. Since 2000, there has been enormous progress on the goal to provide primary education for all children worldwide. The primary school enrollment rate in developing regions reached 91%. By measures in any school, that's a good grade. Now, let's get an even better grade for all kids and achieve the goal of universal primary and secondary education, affordable vocational training, access to higher education, and more.

BY 2030:

Targets: By 2030

1. **Ensure that all girls and boys complete free, equitable and quality primary and secondary education** leading to relevant and Goal-4 effective learning outcomes
2. **Ensure that all learners acquire the knowledge and skills needed** to promote sustainable development, including, among others, through education for sustainable development and sustainable lifestyles, human rights, gender equality, promotion of a culture of peace and non-violence, global citizenship and appreciation of cultural diversity and of culture's contribution to sustainable development

3. **Substantially increase the supply of qualified teachers**, including through international cooperation for teacher training in developing countries, especially least developed countries and small island developing states
4. **Ensure equal access for all women and men** to affordable and quality technical, vocational and tertiary education, including university
5. **Substantially increase the number of youth and adults** who have relevant skills, including technical and vocational skills, for employment, decent jobs and entrepreneurship
6. **Eliminate gender disparities in education and ensure equal access to all levels of education and vocational training for the vulnerable**, including persons with disabilities, indigenous peoples and children in vulnerable situations
7. **Ensure that all youth and a substantial proportion of adults**, both men and women, achieve literacy and numeracy
8. **Build and upgrade education facilities** that are child, disability and gender sensitive and provide safe, nonviolent, inclusive and effective learning environments for all
9. **Substantially expand globally the number of scholarships available to developing countries**, in particular, least developed countries, small island developing States and African countries, for enrolment in higher education, including vocational training and information and communications technology, technical, engineering and scientific programmes, in developed countries and other developing countries

		Preservation of Life	
#16- Peace, Justice and Strong Institutions	• Systemic graft, corruption, and red tape in governance • Human rights violations and slow judicial trial processes	• Araling Panlipunan (AP): Constitution, Three Branches of Government, Anti-Graft Law • EsP: Integrity, Transparency, Honesty in Leadership • English / Filipino: Debate, Critical Analysis of News, Rhetoric	• Civic/Political Literacy • Legal Literacy • Ethical Literacy
#17- Partnership for the Goals	• Limited coordination between local government units (LGUs) and NGOs • Reliance on foreign debt for development funding	• Araling Panlipunan (AP): International Relations, ASEAN, United Nations Agreements • English / Filipino: Technical Writing, Project Proposals, Collaboration Skills • Mathematics: Global Trade Statistics, Foreign Debt Ratios	• Global Literacy • Collaboration/Social Literacy • Information Literacy

Answer briefly.

1. Why do you think it is important to integrate the concept of Education for Sustainable Development / Sustainable Development Goals (SDGs) in the school subjects/curriculum/lesson planning?

Integrating Education for Sustainable Development Goals (SDGs) into school curriculum and lesson planning is crucial because it transforms education from a passive system of memorization into an active engine for nation-building. As the government prioritizes the education sector to uplift the next generation, integrating

the SDGs ensures that the advancement of skills, mastery of learning, and development of behaviors are directly connected to solving real-world crises.

First, it contextualizes learning, making abstract lessons relevant to the daily lives of Filipino students. Instead of learning math formulas or scientific concepts in isolation, students apply them to analyze local issues like inflation, waste management, or climate resilience. Second, it future-proofs students by cultivating essential 21st-century skills such as systems thinking, empathy, and critical problem-solving which are vital for navigating an unpredictable global economy. Ultimately, embedding the SDGs in the classroom shifts the educational focus from merely producing employable individuals to molding proactive, socially responsible citizens who possess both the competence and the character to uplift their communities and the country.

What do you think are appropriate teaching approaches, methods or strategies that teachers could use to integrate the SDGs in the school subjects/curriculum/lesson planning? Please specify.

2. What do you think are the challenges, problems or concerns that you will encounter in integrating SDGs in your lessons? Be specific of the SDG and provide examples.

SDG #1: No Poverty & SDG #10: Reduced Inequalities: In many low-income communities, students themselves are experiencing the harsh realities of poverty, food insecurity, and lack of utilities. Discussing these topics in class requires immense psychological safety and emotional literacy. A teacher risks making marginalized students feel exposed, ashamed, or discouraged if the lessons are not handled with extreme empathy, localized care, and sensitivity.

SDG #4: Quality Education: Severe classroom shortage, large class sizes, and lack of basic learning materials in many public schools make advanced, inquiry-based SDG projects difficult to execute. When teachers are focused on basic physical survival and fundamental literacy in an overcrowded room, higher-order sustainability lessons are pushed aside.

SDG #13: Climate Action: Teachers face strict, fast-paced timelines to cover existing DepEd Most Essential Learning Competencies (MELCs). Forcing a deep-dive lesson on climate change or typhoon preparedness can feel like an extra burden rather than an integrated topic, leading to "surface-level teaching" where the goal is just checked off a list without meaningful student engagement.
