

2E-EDUC 3- Principles and Methods of Teaching

WORKSHEET – My Guiding Psychological Principles for Effective Teaching

Name: Rose Marianne Louis M. Gardoce

Date submitted: August , 2026

Direction:

Below are important and useful psychological principles teachers ought to be aware of from the Coalition for Psychology for Schools and Education.

A. How Do Students Think and Learn

- #1. Students' beliefs or perceptions about intelligence and ability affect their cognitive functioning and learning.
- #2. What students already know affects their learning
- #3. Students' cognitive development and learning are not limited by general stages of development.
- #4. Learning is based on content, so generalizing learning to new contexts is not spontaneous but instead needs to be facilitated.
- #5. Acquiring long-term knowledge and skills is largely dependent on practice.
- #6. Clear, explanatory, and timely feedback to students is important for learning.
- #7. Students' self-regulation assists learning, and self-regulatory skills can be taught.
- #8. Student creativity can be fostered.

B. What Motivates Students?

- #9. Students tend to enjoy learning and perform better when they are more intrinsically than extrinsically motivated to achieve.
- #10. Students persist in the face of challenging tasks and process information more deeply when they adopt mastery goals rather than performance goals.
- #11. Teachers' expectations about their students affect students' opportunities to learn, their motivation, and their learning outcomes.
- #12. Setting goals that are short term (proximal), specific, and moderately challenging enhances motivation more than establishing goals that are long term (distal), general, and overly challenging.

C. Why Are Social Context, Interpersonal Relationships and Emotional Well-being Important to Student Learning?

- #13. Learning is situated with multiple social contexts.
- #14. Interpersonal relationships and communication are critical to both the teaching-learning process and the social-emotional development of students.
- #15. Emotional well-being influences educational performance, learning, and development.

D. How Can the Classroom Best Be Managed?

- #16. Expectations for classroom conduct and social interaction are learned and can be taught using proven principles of behavior and effective classroom instruction.
- #17. Effective classroom management is based on (a) setting and communicating high expectations, (b) consistently nurturing positive relationships, and (c) providing a high level of student support.

E. How to Assess Student Progress?

- #18. Formative and summative assessments are both important and useful but require different approaches and interpretations.
- #19. Students' skills, knowledge, and abilities are best measured with assessment processes grounded in psychological science with well-defined standards for quality and fairness.
- #20. Making sense of assessment data depends on clear, appropriate and fair interpretation

Questions for Reflections:

- I. Which of the above principles are you practicing now or intend to practice in the future? Please copy the number and the principle and explain by citing educational settings or teaching-learning situations.

A. How Do Students Think and Learn

#6. Clear, explanatory, and timely feedback to students is important for learning.

As a language instructor, I consistently provide my students with clear, specific, and constructive feedback because it helps them recognize both their strengths and the areas they need to improve. Rather than simply telling students whether their answers are correct or incorrect, I explain the underlying concepts and the reasons behind their mistakes.

For example, during writing sessions, instead of giving vague feedback such as, "Your essay needs work," which would likely leave the student wondering what exactly needs improvement, I provide specific and actionable comments. I might say, "Your introduction clearly presents your main idea. However, your second paragraph needs more supporting examples to strengthen your argument." This type of feedback helps students understand not only what needs to be improved but also why it needs improvement and how they can revise their work more effectively. In addition, I provide feedback immediately after learning activities whenever possible, such as through spot-checking during class or reviewing their performance right after a task. I believe that timely feedback enables students to correct misconceptions while the lesson is still fresh in their minds and apply the feedback to subsequent activities.

#4. Learning is based on content, so generalizing learning to new contexts is not spontaneous but instead needs to be facilitated.

As I continue learning in this program, I have come to appreciate the importance of helping students apply what they learn beyond the classroom. I have realized that students learn more effectively when they understand how a concept can be used in real-life situations. However, transferring knowledge from one context to another does not happen automatically. For instance, a student may score 95% on a grammar quiz but still make mistakes when speaking English in a conversation

It is then the teacher's responsibility to intentionally facilitate this process by providing meaningful examples, authentic learning experiences, and opportunities for students to apply their knowledge in different settings. One effective way is to provide many different examples then allow learners to practice them in various situations.

As a language instructor, I intend to incorporate more real-world tasks and communicative activities that encourage students to use English in practical situations. By doing so, I hope to help them recognize when and how to apply what they have learned, making their learning more meaningful, transferable, and useful in their everyday lives.

B. What Motivates Students?

#11. Teachers' expectations about their students affect students' opportunities to learn, their motivation, and their learning outcomes.

As someone who is personally motivated by encouragement, I strongly believe in the importance of maintaining high and positive expectations for every student. In my teaching practice, I make a conscious effort to ensure that each learner receives the same level of support and feels that their teacher genuinely believes in their potential. For instance, I consistently offer words of encouragement, remind students not to compare themselves with others, and guide them toward discovering the correct answers rather than simply providing them. By doing so, I encourage them to think critically while assuring them that making mistakes is a natural part of the learning process. I believe that when students know their teacher has confidence in their abilities, they become more motivated to exert greater effort and develop self-confidence. Consequently, they become more willing to participate, take risks, and learn from their mistakes without fear of being judged. This positive and supportive learning environment empowers students to recognize their strengths, overcome challenges, and continuously strive to reach their full potential.

C. Why Are Social Context, Interpersonal Relationships, and Emotional Well-being Important to Student Learning?

#13. Learning is situated within multiple social contexts.

A student's learning is influenced by various people and environments, including their family, school, peers, community, and even social media. Because each student comes from a unique background, they bring different experiences, perspectives, values, and learning needs into the classroom. Recognizing these differences enables teachers to create a more inclusive and supportive learning environment. Since learning is shaped by these social contexts, teachers should foster a classroom where students feel safe to express their ideas, respected regardless of their background, and comfortable asking questions without fear of being judged.

For example, a student may feel hesitant to speak English because they are afraid of making mistakes. In a supportive classroom, however, the teacher encourages mutual respect among students, values effort over perfection, and treats mistakes as opportunities for learning. As a result, the student gradually gains confidence, becomes more willing to participate in classroom discussions, and develops greater proficiency in using the language.

D. How Can the Classroom Best Be Managed?

#17. Effective classroom management is based on (a) setting and communicating high expectations, (b) consistently nurturing positive relationships, and (c) providing a high level of student support.

A well-managed classroom is built on creating a positive learning environment, setting and communicating clear expectations, and providing consistent support to all students. Effective classroom management goes beyond maintaining discipline; it fosters an atmosphere where students feel safe, respected, and motivated to learn. When students understand what is expected of them and know that their teacher is available to guide and support them, they are more likely to engage actively in classroom activities.

In my case, when students are preparing for a group presentation, I clearly explain the presentation criteria and expectations, encourage them to collaborate respectfully, and monitor each group's progress while providing guidance whenever difficulties arise. By offering timely support and constructive feedback, I am able to help my students build confidence and stay focused on the task. As a result, students are more likely to participate actively, work cooperatively, and successfully achieve the learning objectives.

E. How to Assess Student Progress?

Both formative and summative assessments are essential because they serve different purposes. Formative assessment is conducted during the learning process to monitor students' understanding and provide feedback for improvement, while summative assessment is given at the end of a lesson or unit to evaluate what students have learned. Therefore, teachers should use formative assessment to guide instruction and support learning, and summative assessment to measure students' overall achievement.

For example, in an English writing class, I first ask students to submit a draft of their essay and provide feedback on their thesis statement, organization, and grammar so they can revise their work. This is formative assessment because it helps students improve while they are still learning. At the end of the unit, students submit their final essay, which is graded using a rubric. This is summative assessment because it evaluates their overall writing performance after instruction has been completed.

2. Over-all, what does this activity mean to you as a practicing/future teacher in relation to teaching-learning process particularly in promoting learner responsibility and achievement?

Overall, this activity has deepened my understanding that effective teaching involves much more than delivering content. It has reinforced the importance of creating a supportive learning environment through clear expectations, timely and constructive feedback, positive teacher–student relationships, appropriate classroom management, and meaningful assessment. These principles have helped me

realize that students become more responsible for their own learning when they feel valued, encouraged, and guided rather than judged.

As a practicing language instructor, I intend to continue applying these principles by designing lessons that actively engage students, encourage them to think critically, and help them apply their learning to real-life situations. I also recognize that my role is not only to teach academic content but also to inspire confidence, foster a growth mindset, and provide equal opportunities for every learner to succeed. Ultimately, this activity has strengthened my commitment to becoming a reflective and learner-centered educator who empowers students to take ownership of their learning and achieve their full potential.
